

# Drill rig for test boarings

**Excavator  
digging soil  
samples for  
lagoons**

**Forms for the concrete pedestals for PFAS filters**

## Preparation for lagoon test pits

Pressure test backwash  
supply line

A deep, narrow trench has been excavated in the ground, running parallel to a white metal building on the left. The trench is filled with loose, brown soil. In the background, a white pickup truck and a white utility truck with a yellow crane are parked on a dirt area. Several workers in high-visibility vests are visible near the vehicles. A green pipe is visible near the building. The sky is blue with some clouds, and there are trees in the distance.

**Trench for electric  
duct bank**
